

Beneq Corporate Environmental Policy

Beneq (Thin Film Equipment and Lumineq Displays) is committed to operating ethically and in accordance with the environmental legislation and directives of the countries and economic and political unions in which it operates. We encourage our employees to act in order to minimize the environmental impacts of our functions. We use natural resources responsibly and sparingly and our manufacturing processes are set up to be as material efficient as possible. We enable our customers to make sustainable choices by providing virtually service-free products with long lifetimes. Our thin film coating solutions as a whole enhance functionality and the lifetime of our customers' end products.

Reduce, Reuse & Recycle

It is in our foremost interest to reduce the amount of waste whenever and wherever possible. We collect and sort all waste and recycle it accordingly. We go further in saving energy, and have installed heat recovery units in the manufacturing site for displays. All production-related effluents are filtered and neutralized before being discharged in a proper way.

Beneq products have a proven long lifetime, and as such reduce the amount of waste created. However, when it is time to replace a unit or parts of it, it must be recycled or disposed of according to local laws. Beneq products contain waste materials that can be hazardous if not disposed of properly.

Packaging & Packaging Waste

Our packaging is designed to be compact and protect our product in the best possible way. Beneq manages the recovery of the packaging it has placed on the market in accordance with the EU directive, the Waste Act and Council of State decision and decrees (FIN).

Directives and Regulations

Concerning our products and procurement process, the following regulations are worth pointing out:

- We fully comply with the Restriction of Hazardous Substances (RoHS) and the RoHS recast directives. All RoHS compliant products are identified by the letters "LF" in the product part number. Certificates of RoHS Compliance are available upon request.
- We fully comply with the Registration, Evaluation, Authorization and Restriction of Chemical substances (REACH) Regulation. For more information on our REACH compliance, please review Beneq's REACH Declaration (see separate document).
- We fully comply with the Dodd-Frank Act on Conflict Minerals. For more information please review Beneq's Conflict Minerals Policy (see separate document).

Beneq is a member of Cleantech Finland, which promotes the development and use of all materials, processes and services that reduce the resulting burden of corporate and consumer activities on the environment. www.cleantech.fi
